

Frontend UI Developer

This is a great opportunity to be a part of "Peepable". We're an innovative new video search engine, which is already creating some excitement in the Australian media and in the Australian startup scene.

"Peepable is all about bringing video search out of the dark ages, and about liberating online video, by making videos from across the net as searchable and shareable as text."

The Peepable beta is launching soon and we're already onto our next stage of product development. We're looking for someone to take on a leadership role with our front end javascript/coffeescript development.

Ideally you will have significant experience with backbone, marionette and bootstrap. A degree in Computer Science or Engineering and a minimum of 3 years relevant experience are both highly desirable.

You'll be an important member of our team, using your technical skills to help develop our large-scale web application and solve considerable technical challenges. Your input will help Peepable to achieve our product and business goals locally and internationally.

We're a young company and you'll be encouraged contribute to the design and implementation choices we make for Peepable. Our success will provide opportunities to gain valuable experience and grow with us as Peepable grows.

Remote working may be possible for the right candidate.

If you're interested in joining our team, please send your CV in MS Word format to Alex French by email to alex.french@peepable.com with the email subject "Developer Position".
